CIRCUMSTANCES SURROUNDING THE DEATH (write additional info overleaf if required) Dr reported Mum is inpatient - baby Child A was born at 31 weeks +2 by emergency C Section due to I&S I&S I&S Male and female twin - female is ok - baby Child A born in good condition but needed cpap - needed cannula inserted for nutrition, UVC the position of the line was not appropriate - so baby had long line - also abx iv fluids - Dr told that suddenly baby alarm sounded. Information to coroner was that umbilical line was inserted but found on X-ray to have gone too far. It was left in. A percutaneous line was inserted and also went too far. Sometime later the baby suffered an apnoeic event and then went into p.e.a. - patient died. Paediatric PM authorised.
