Subject: Query re NNU Incidents

Dear Peter

I understand that you have been in touch regarding the 72 hour review of the triplets who died.

I can confirm that the initial review was held yesterday and that this has triggered a number of areas for deeper dive, including peer review of the x-rays undertaken on **Child O** and a further review by obstetricians regarding delivery and possibility that the liver sub-capsular haematoma [identified on PM] occurred in perinatal period. No clear cause of death was identified for **Child P** from the initial review.

Hope this helps

Ruth

Kind Regards

Ruth Millward
