Subject: Baby [REDACTED] ~[NOT PROTECTIVELY MARKED] ~

For attention Of Dr McPartland

Dear Dr

On 23rd June 2015 you carried out a post mortem on the above baby (Your Ref I&S). The baby's mother has raised a query that I am unable to answer and I was hoping you would be able to assist.

The information we were initially given is that the mother's waters broke 36 hours prior to birth but the mother states it was 60 hours prior. Could you please advise whether you were in possession of the medical records when you carried out the examination and if so the correct time scale.

Could you also advise whether it would have made any significant difference to the baby's health.

Many thanks

Regards
