Subject: ? re PM

Hi Jo

Case [REDACTED] PM report 27/8/15
Can I just pick your brain

You have said that from the histopathology the diagnosis is pneumonia – can I confirm did you see evidence of infection histopathologically or was it inflammation

Is there any chance this could have been a congenital pneumonia that then caused the PROM, rather than PROM causing pneumonia ascending from genital tract

I know the placenta may have helped more but was just wondering?

Thanks
jo
